Session 15: Best Practice Procedures

Best Practice Procedures for improved chemical safety

- Best Practice Procedures **establish a standard course of action.**
- They are written guidelines that explain what is expected and required to undertake a specific action and/or handle a specific chemical **while following the best practices in chemical safety**
- The aim of Best Practice Procedures **is to explain in a simple but precise way the best practices to follow** in the handling of each chemical or equipment, and should contain the necessary information to undertake operations in a safe way, under normal, start-up, shut-down, and abnormal (such as accident) conditions
